***Allowable Subject Matter***

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: the closest art of record Wirth (3,617,493) discloses a process of cracking a crude oil in a system containing a furnace to produce olefins. Wirth discloses that the crude oil is fed into a convection zone operated at a temperature ranging from 450-700°F to produce a liquid phase and gas phase. The gas phase is fed to a radiant zone for cracking. The liquid phase with steam are further fed to another convection zone for further producing additional gas phase (the abstract; figure; col. 2, line 55 thru col. 5, line 8). However, Wirth is totally silent as using a cavitation device to vaporize and mildly crack a part of the liquid removed from the vaporization/mild cracking unit to form an additional liquid/vapor mixture which is returned to the vaporization/mild cracking unit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thuan D. Dang whose telephone number is 571-272-1445. The examiner can normally be reached on Mon-Thu.
